Professional Summary

Software Engineer with hands-on experience in Java and Spring Boot development, building REST APIs, implementing business logic, resolving production issues, and supporting scalable backend applications. Experienced working in Agile teams with cross-functional collaboration, software development, automation, and operational excellence. Strong foundation in object-oriented programming, clean code practices, SQL debugging, and developing maintainable software solutions. Passionate about building reliable systems, improving developer productivity through automation, and delivering high-quality customer experiences.

Technical Skills

Programming Languages: Java, SQL

Backend Technologies: Spring Boot, Spring Security, Spring Data JPA, REST APIs, Maven

Core Computer Science: Object-Oriented Programming, Data Structures & Algorithms, Design Patterns, Multi-threading

Databases: MySQL, MongoDB

Developer Tools: Git, Linux, IntelliJ IDEA, Postman, JIRA, Google Workspace

Professional Experience

Cognam Technologies

Software Engineer

- Implemented Java and Spring Boot backend features by developing REST endpoints, business logic, and production defect fixes within Agile software development teams.
- Enhanced REST APIs in collaboration with software engineers, participated in peer code reviews, and supported production-ready software releases.
- Investigated backend production issues using SQL queries, Linux logs, and application logs, reducing bug reopen rate from 30% to 10%.
- Collaborated with engineering and business stakeholders in Agile ceremonies to deliver high-quality software and improve operational efficiency.

ImpactQA Services

Quality Analyst

- Executed functional, regression, and API testing across Agile releases while working closely with software development teams.
- Identified API performance bottlenecks using JMeter, contributing to response time improvements from approximately 3 seconds to under 800 ms.
- Supported software delivery through defect analysis, debugging, and collaboration with developers to improve product quality.

Projects

Expense Management Platform (Java Spring Boot)

- Developed a layered backend application using Java, Spring Boot, Spring Data JPA, and MySQL.
- Implemented JWT authentication, role-based authorization, centralized exception handling, validation, pagination, filtering, and CRUD REST APIs.
- Followed clean architecture principles, modular service design, and Git-based version control to build a maintainable backend application.

Education

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology in Computer Science and Engineering

2016 – 2020
